## Portfolio Analytics

### Achieve clarity across building projects

- Aggregate performance at project and portfolio level**  
 Access total Global Warming Potential (GWP), circularity scores, and key indicators for every building and infrastructure projects in one view.
- Measure progress towards your net zero targets**  
 Review design comparisons and track GWP trends by project type, region, or year.
- Compare results against industry benchmarks**  
 Validate your performance by comparing GWP per Gross Floor Area (GFA) with similar project results and market references.
- Share tailored, reliable results in minutes**  
 Export clear charts, tables, and summaries for leadership updates, client discussions, and tenders.

## EPD Usage Analytics

### Understand how materials shape impact

- Reveal trends in material and EPD use**  
 See which materials and environmental product declarations (EPDs) your projects rely on most and how they influence overall carbon results.
- Identify materials that hold back your carbon goals**  
 Pinpoint high-impact products and materials that contribute most to emissions across your portfolio.
- Guide better design and procurement choices**  
 Use clear evidence from material performance to recommend lower-carbon alternatives and support informed purchasing decisions.
